Sample Questions from BECE Mathematics 2014

To give a clearer picture, here are some representative questions from the 2014 exam:

Question 1: Number and Operations

If $\frac{3}{4}$ of a number is 36, what is the number?

- 48
- 54
- 72
- 96

Solution: Let the number be x . Then, $\left(\frac{3}{4}\right)x = 36$.

$$x = 36 \left(\frac{4}{3}\right) = 36 \frac{4}{3} = 48.$$

Answer: 48

Question 2: Geometry and Angles

In the diagram below, two angles are supplementary. If one angle measures 110° , what is the measure of the other angle?

- 70°
- 80°
- 110°
- 130°

Solution: Supplementary angles sum to 180° . So, the other angle = $180^\circ - 110^\circ = 70^\circ$.

Answer: 70°

Question 3: Data Handling

The table below shows the scores of 50 students in a mathematics test. What is the average score?

Score Range	Number of Students
0-49	10
50-69	25
70-100	15

Solution: To find the average, multiply the midpoints by the number of students and divide by total students.

- 0-49: midpoint = 24.5, total = $24.5 \times 10 = 245$
- 50-69: midpoint = 59.5, total = $59.5 \times 25 = 1487.5$
- 70-100: midpoint = 85, total = $85 \times 15 = 1275$

Total sum = $245 + 1487.5 + 1275 = 3007.5$.

Average score = $3007.5 / 50 = 60.15$.
